Since then, Marshalls has developed into the country’s leading supplier of natural stone, as well as commercial hard landscaping products, linear drainage and street furniture. The experience gained from those early days has enabled Marshalls to evolve and adapt to meet customer needs, becoming the most innovative and exciting stone supplier in the country.

Marshalls was founded in the 1890’s when Solomon Marshall first quarried and produced Cromwell Yorkstone from the hillside at Southowram.
Marshalls are the UK’s premier manufacturer and distributor of natural stone products for the built environment.

As well as a broad range of indigenous UK stone, Marshalls offers materials that have been carefully selected via our long-established network of international stone partners. All overseas stone is responsibly sourced through a robust, proven supply chain, independently audited to ensure our high standards of ethical compliance and best practice are maintained.

When it comes to stone selection, Marshalls’ experience in helping achieve exceptional projects is linked to a broad knowledge of stone, combined with an appreciation for the performance requirements and aesthetic touches needed to achieve brilliant results. With a range of granites from Iberia, Vietnam and China, Marshalls have the portfolio of products to achieve any designer’s vision for their space.

Marshalls’ in-house experts can offer advice on selection and assist with value engineering, and have the capability to offer bespoke design and production, even including advanced artwork techniques such as embossing, water jet work and inlaying.

As owners of the largest fleet of crane offload vehicles in the UK we can also offer complete site flexibility in even the most demanding of environments and time sensitive programmes.
At Marshalls we are committed to consistent supply of the very best quality natural stone, purchased to the very highest standards of ethical best practice.

QUALITY
At Marshalls all our own quarries and stone production facilities carry not only the international mark of Quality ISO9001 but also the International Environmental ISO14001 accreditation and the OSH18001 accreditation for Health & Safety. Our commitment to these management systems has led to the adoption of PAS 99, an integrated system that combines all three standards. The only stone producer in the world to do so. From our other stone suppliers we demand a commitment to the quality of both production and also of materials. Marshalls has its own locally based inspectors on the ground who ensure that consistency and quality are at the heart of everything we do.

ETHICAL
Our commitment to the ethical sourcing of natural stone from abroad is regarded as exemplary. Not only have key people from Marshalls provided leadership at the Ethical Trading Initiative (ETI) but we are the only construction sector signatory to the UN Global Compact which relates to ethical standards. We have BES6001 certification for responsible sourcing, and were the first company in the world to be awarded BES6002 for ethical labour sourcing. To monitor our activity in sustainability, please visit www.marshalls.co.uk/sustainability and view our United Nations Global Compact “Communication on Progress”.

ENVIRONMENTAL
All Marshalls own quarries and production facilities have environmental accreditation to ISO 14001. Further to that we have undertaken the largest single carbon footprinting of construction materials in the world with over 3,000 individual products being carbon footprinted. All our Yorkstones, our Indian sandstones and Chinese granite are all carbon footprinted so that any choices of material can be understood and assessed in regards to the effect on the environment.

WORKING WITH OUR SUPPLY CHAIN
At Marshalls we work with our suppliers to improve the standards of materials, production and worker’s conditions continually. Our suppliers are chosen for their commitment to quality, consistency and ethics as well as their knowledge and versatility. Designers and contractors need confidence in their supplier and we are committed to achieving a seamless service regardless of where the materials come from.

THE ETHICAL RISK INDEX
The Marshalls Ethical Risk Index (ERI) is the next step on the journey toward full supply chain transparency in the Natural Stone sector. Using a bespoke framework built on independent audits, customers are given a genuine insight into the multi-dimensional ethical challenges facing stone procurers; with the aim of empowering users of potential issues and with a clear rating system to allow for more informed decision making.

To illustrate the relative level of ethical risk, the Ethical Risk Index score is initially displayed using a basic Risk Indicator. This provides a quick, simple insight into the degree of ethical risk associated with that stone type, and how the Marshalls supply chain compares to the cluster. If users require a more in-depth perspective, they can access the Ethical Radar which clearly displays the scoring for that product against each of the 10 measures making up the ERI score.
Inspire with artwork

The difference between a good project and a truly memorable project is often in the detail. Those design flourishes that can inspire the viewer, or perhaps help them learn more about the history of the locale. Stone is endlessly versatile, with our skilled masons able to use classic techniques and the latest technology to create works of art. From advanced water-jet production, to traditional hand-finishing and inlaying, designers specifying stone can be more ambitious than ever when visualising compelling new spaces.

Stainless Steel Lettering, Liverpool
Granite is a tough durable material which can be fashioned into a wide range of landscape products and provides a very modern aesthetic. All of Marshalls’ granites are available in at least paving, setts and kerb although most can be used to create special features.

Marshalls’ work on bespoke projects from initial concept design through to intricate detailing. With every element sourced, tailored or created around your project vision, our theoretical and practical understanding of urban space is unrivalled.

Whether it is radius step units with an inlaid granite visibility strip, or a curved bench to complement the architecture of a public space, Marshalls can turn your design ideas into reality.

CASE STUDY

The redevelopment of the Pier Head area of Liverpool is now a multi-award winning space which acknowledges the excellence of the overall design by AECOM. This design has some very ingenious and well designed details as well as some very subtle design elements. One of the more subtle elements in the midst of the blended paving palette is the way that sizes have been used to emphasise the spaces between the vertical features.

Furthest away from the vertical elements that form steps and seats are the very largest flag sizes creating a huge gauged paving effect. As the paving then starts to approach the vertical elements it then breaks down to quarter size, then quarter size again and finally to a sixth size which is a 100x100mm sett. The majority of these smaller setts also change texture from flamed to cropped enhancing the size difference.

The clever use of the paving in this way mirrors the adjacent River Mersey which moves in waves down the estuary. The calmer waters in the centre becoming more choppy towards the shore with finally the water frothing against the Pier Head.
Inspire with colour

From warm buffs, reds and pinks, through to a wide variety of cooler greys and blacks, the vast colour spectrum of granite offers designers the opportunity to tell a story, or create something unique.

Heartlands | Cornwall

CASE STUDY

The Heartlands world heritage site was the result of the long held ambition to redevelop the site of Robinsons tin mine shaft near Pool in West Cornwall. The site celebrates the ‘big three’ mined minerals of copper and tin metals and also arsenic, which were mined there and also links into other mines around the area at East Pool, King Edward, Geevor, Poldark and Wheal.

Locally, the Red River has been intrinsically linked to the mining industry and even the name comes from the tin mining industry whose waste used to colour the water red. Its water was used both in the separation process of mining and as a source of power. The river has over the past few centuries been diverted, canalised and altered as required for industry. The Heartlands Red River water feature design by LUC is an acknowledgement of the vital importance of the river to the mining industry. The general geometric shape and angular changes of direction acknowledge the influence that man has had on this river over time.

When choosing materials for this feature the colour choice was obvious. After considering several red options the choice was made to use a specific all red stone, Imperial Red. The material is very consistently red and the flame texturing required to make this safe for pedestrians has little effect on the colour. When wet the red stone is further enhanced and becomes a truly red river.

With colour

GRANITE COLLECTION

INSPIRE WITH COLOUR
Inspire with blends

The deliberate mixing of different elements to create a positive tapestry of colour and interest across a space. Designers are now becoming adept at blending stones together to create innovative and unique palettes which can create either cool or warm spaces or can take in a small flavour of the surrounding environment’s colours.

Different coloured granite setts are quite commonly blended but we have also seen granite paving being used in the same way.

CASE STUDY

13 different shades of polished granite from light grey to black were laid over 3000m² at the Victoria Gate. The blend of colours creates a remarkable aesthetic laid in an eye-catching herringbone pattern. Designed by ACME and installed by A. Andrews & Sons, the colours are accentuated by the polished texture, providing a bold and luxurious finish to complement the project’s store fronts and diamond panelled roof.
The use of an appearance, feel or consistency of a material to create effects or contrasts for a design. The texturing of stone affects its pigment; from a subtle shade variation to a complete change of colour. The most dramatic changes tend to be on the stronger coloured stones such as blacks and strong reds but then buffs and beiges are significantly altered by flame texturing.

Different textures can also be a way of creating subtle banding within an element without having to try and mould two stones together. Heavier textures could be used to determine walking routes, a warning around ground mounted features such as fountains and rills or even as a deterrent for skateboarders.

CASE STUDY

As part of the continuing regeneration of Grosvenor Hill and its associated public realm, the client was keen to highlight the heritage of the location. For the opening of the new Gagosian Gallery at 20 Grosvenor Hill in Mayfair, the surrounding streetscape was also to be transformed to create a new thoroughfare connecting Bond Street to Berkeley Square and Mount Street. The ambition was to develop a new arts quarter in order to attract a rich diversity of users to Mayfair, creating a thriving new district.

Marshalls worked with BDP and FM Conway to supply the natural stone hard landscaping to the space. The solution was a mixed paving design consisting of varying shades and textures of grey granite banding cutting through the pedestrian areas. The different textures provided contrast and interest to the space, helping achieve a memorable project as the designer intended.

The darker bands were a blend of Namaka and Tritanial sets which contrast with the light grey Callisto. The lighter bands also contain a lightly textured “seawave” granite which adds depth to paving.

Working collaboratively with BDP and FM Conway, Marshalls also provided the full kerb solution around the perimeter of the space. A combination of drop, radius and straight kerbs were supplied in Callisto granite to finish the location.
Inspire with sizes

The use of size or changes in size to emphasise a space or a detail to create interest in a landscape. Random lengths in Granite are prime examples but mixing sizes in any material can achieve a unique aesthetic or a specific pattern. Using mixed sizes together can also create a changing narrative or even emphasise a detail.

People automatically assimilate smaller element sizes for the trafficked areas and larger flag sizes in the pedestrian areas. Generally this works in terms of performance as well but it also gives the opportunity to break the norm and challenge people and usage by using changing sizes or alignment in some way.

CASE STUDY

For the regeneration of Taff St, Pontypridd, the designers created two mixes for different areas of the town. A warm blend with reds and pinks for the lower part of the high street and a black, grey and green blend for Market Street and into the famous Penull Square. The more central trafficked areas are large deep setts which are generally edged with flush channels instead of upstand kerbs. The footpaths have paving sized slabs continuing the same mixes but making the pedestrian areas quite distinct from the trafficked areas.

Significant cost was removed from the project by varying the thickness of the setts according to the likely usage of the area. The deep setts were produced to a bespoke thickness to account for the heavy trafficking in the carriageway. In contrast the pedestrian areas, although in the same granite and texture, were produced thinner to reduce costs.

The very edges of the street at the intersection with the buildings are very small setts in exactly the same mix which allow for the meandering fronts to the buildings and to help take out any variations in levels.

Using different sized products on the scheme allowed a form of stylish delineation without deviating from the colour blends.

Williamson Square, Liverpool
Pattern can be used to transform the visual aesthetic of a space. Mimicking a geometric pattern feature present in a building or landscape design adds character to a space and can even give the appearance that the area is larger than it is. Incorporating coloured banding and different sizes into a pattern has a striking visual impact in a scheme. Introducing an accent colour can give a touch of warmth to even the most sophisticated of spaces.

**INSPIRE WITH PATTERN**

**CASE STUDY**

With over 11 million visitors each year, Exhibition Road is Britain’s most used shared space. As well as being a busy pedestrian link between Hyde Park and Brompton Road through to South Kensington Tube Station, it is also a bus route. Exhibition Road is home to the V&A, Natural History Museum, Science Museum, Imperial College, the Royal College of Music & the Royal Albert Hall.

Dixon Jones were tasked with creating a design that was seamless across the space while addressing some of the issues of shared spaces such as driving speeds and keeping pedestrians safe. Their very simple but innovative design solution was to use the norms of driving and then changing them to make drivers feel less comfortable and more aware of their surroundings.

The simple pattern of the granite setts was created by the use of light and dark stone, and was installed at a diagonal angle, with no kerbs used. This diagonal form upsets the norms of driving, changing the usual paradigm of carriageway design. Without the more obvious indicators of a clear roadway, kerb and pavement, drivers are less sure of how the space works. They are then encouraged to slow down and concentrate on other users of the space, all achieved by the choice of material and the pattern it was installed to.

PORTUGAL IS BLESSED WITH A FINE SELECTION OF NATURAL GRANITES; AND IS ONE OF THE MAJOR SOURCES OF EUROPEAN NATURAL STONE.
Portuguese Granite
TARVOS

TARVOS GRANITE
This silver grey stone is available in a flamed, blasted or honed finish, each of which gives the granite a different appearance for varying applications. Available for all product areas such as paving, setts, kerbs, tactile, steps, water management, street furniture or other bespoke specialised masonry items such as veneers for planters or furniture. Tarvos flamed finish Granite is suitable for both pedestrian or vehicular trafficked areas.

Quarried and produced in Europe to ISO9001 quality assurance standards. All Marshalls Granites are fully tested to the appropriate standards in the UK and are all CE marked in accordance with the latest legislation. Granites are generally hard wearing, strong and durable landscaping materials.

Products include Paving, Setts and Kerbs, others may be available by agreement.

The Marshalls granite portfolio lends opportunity for design creativity with a selection of colours, textures and finishes. Patterns and colour variations can be used to break up large spaces or to add further depth to the perimeter of a landscape.

Adding small areas of buff, reds or browns into a landscape adds an engaging warmth to even the most sophisticated spaces. Alternatively, using bold splashes of colour can complement adjacent architecture or reinforce the branding of a location.

Using the granites in the brochure, we have hand selected mixes to inspire you for your next project.
OTHER STONE PRODUCTS AT MARSHALLS

Beyond granite, Marshalls are able to offer a broad range of stone, providing specifiers with an extensive palette of colours and textures to design with. From our own reserves of Yorkstone, or through our independently audited international supply chains, Marshalls’ Natural Stone Paving business can manufacture any stone product required for the built environment.

For more information please visit - marshalls.co.uk/naturalstone

MASONRY & FACADES

Marshalls produce a range of natural stone products suited for the vertical environment including ashlar walling, rainscreen cladding and bespoke masonry. Sourced from both the UK and the international stone market, the range is ideal for both commercial and residential projects, from the modest to the most ambitious.

For more information please visit - marshalls.co.uk/masonry-facades
