

DREXUS LITE

A Pre-Assembled Plastic Channel, Complete With Cast Iron Grate

- Constant depth with 1m lengths of channel
- 2 x CI grates per 1m channel length
- Available in the most common widths and depths
- Complete piece unit - so simpler and quicker on each installation
- Low weight – easy to lift and manoeuvre by hand
- B and C loading classification to enable use in most areas

DREXUS LITE

A Pre-Assembled Plastic Channel, Complete With Cast Iron Grate

Marshalls has been providing the industry with concrete linear drainage systems for over forty years.

Covering low, medium and high capacity options as well as a range of load classes, Marshalls' linear drainage systems combine quality with resilience, now available with a wider range of options. Marshalls is meeting the growing demand for more cost-effective and easy-to-install linear drain channel systems, taking into consideration requirements and needs.

We understand that certain projects and housings will ultimately lend themselves to the use of a plastic channel, whilst combining a personal preference for the use of a plastic channel versus a concrete channel (and vice versa).

Excavation depths can be limited when services are positioned close to the surface or where sub-soil drainage would be impeded. Low profile drainage channels can solve such issues and provide effective water management for your project.

Drexus Lite is the new addition to Marshalls Linear Drainage. Available in 1m length with two widths and two depths, complete with a cast iron grating system. It is already pre-fixed, making your life easier, simpler and quicker, so that you can move onto the next job.

130mm width

75mm depth

130mm width	75mm depth
130mm width	150mm depth
200mm width	75mm depth
200mm width	150mm depth

1. Lightweight Unit

Easy to lift and position by hand. No equipment required, which leads to easy installation

2. Complete Piece Unit

As the channel and grating are assembled as a single piece unit, you save time and money fixing together, with no lost parts

3. Affixed Frame Security

For the C Grated and above systems/Angle Housing, these come with the Affixed Frame System so that you can have peace of mind on their security

4. Easy Installation Method

Simple slots at each end push together in quick time ensuring high levels of productivity

5. Delivery when it's convenient for you

We know how important it is for jobs to start and finish on time, so we ensure that our products are with you, exactly where and when you need them

Marshalls is committed to ensuring that the right system is selected, detailed, delivered and installed.

The right selection of linear drainage system is crucial to the function of any hard landscaping. Our Linear Drainage Team will work in partnership with the specifier, engineer and contractor, to become an integrated part of the design process. This helps the transformation, delivering ideas into hydraulic designs which match the individual project requirements giving total peace of mind.

In-House Design Support Services:

By use of our bespoke computer software the Design Team can plan realistic and rapid solutions to your drainage needs.

The Design Team will:

- Work with the project team to ensure the clients' expectations are met
- Operate with either electronic (CAD) or hard copy drawings
- Assist in the selection of the most appropriate system
- Provide hydraulic data to support the adequacy of the selected system
- Provide schedule and / or layouts of the components as appropriate

// Our everyday goal is simple – support the customers' performance and aesthetic design aspirations with a commercially driven, value added design support service, excelling through computer aided drawings, engineered solutions and technical advice. //

- Darryl Haigh
