Our environment impacts everything we do. The better our environment, the better we can be. At Marshalls our aim is to create opportunities for better spaces for all, in our homes, streets, schools, offices and retail spaces. The Marshalls product range is designed around inspiring others to imagine better and create exceptional landscapes for all to enjoy.

MARSHALLS MEMBERSHIP OF UNGC

Marshalls is a member of the UK Network of the United Nations Global Compact concerned with demonstrating and building the social legitimacy of business and markets. The UNGC requires members to align their operations with ten universally accepted principles in the areas of human rights, labour, the environment and anti-corruption. Marshalls reports annually on its progress upholding these ten principles and these reports can be found at www.marshalls.co.uk/sustainability/publications

RESPONSIBLE SOURCING

Our commitment to responsible sourcing is demonstrated through our integrated management systems which control the way we source constituent materials. For schemes where BREEAM and CEEQUAL assessments are being conducted, we are happy to work with our customers to provide them with evidence to achieve credits relating to our products and services.

HOME BUILDERS FEDERATION

Marshalls is a member of the Home Builders Federation. HBF is the voice of the home building industry in England and Wales; we represent member interests on a national and regional level to create the best possible climate in which we can deliver the homes this country needs.

Marshalls 360 brings together our design, technical, engineering and consultancy expertise to offer you a support programme like no other. With a full suite of services, all designed around you, Marshalls 360 helps you add certainty to each and every project - all for no additional cost.

Our vision is built on four pillars:

• DEMONSTRATING LEADERSHIP: we believe in driving the industry forward. It’s an ambition we’ve been acting on for 120 years, thanks to our size, capability, range of products and unmatched market knowledge.

• DELIVERING EXCELLENCE: we have very high standards. Our products have to be innovative, our people have to be the best, our environment has to be perfect. Only then can we deliver the quality our clients expect, at every stage of the process.

• BUILDING TRUST: everyone at Marshalls acts with integrity, treating customers and their projects with care and respect. It means people trust us with their home, their business, their town, and it’s how we foster relationships for the long term.

• BEING SUSTAINABLE: we use the world to source our products, so we have a responsibility to look after it. It’s something we have been committed to for over 120 years and an essential part of our longevity. Whether it’s creating stronger communities, preserving environments, or contributing to the UN Global Compact, our work is always sustainable.

Marshalls 360 Design Space

The Marshalls Design Space is an exclusive venue for architects and design professionals. It’s a space to explore and experiment with materials, colours and textures. It’s a space where imagination comes alive, and where a calendar of events, guest speakers and CPD sessions, it’s a space to learn too.

Reconstituted Walling

Marshalls’ comprehensive range of reconstituted walling products are suitable for a wide range of project types including residential and commercial schemes.

From large-scale revered commercial projects to distinctive housing designs, Marshalls provides your walling solution with advice and support from inception right through to completion. Marshalls’ reconstituted concrete walling range features Cromwell, Epoch and Thistlestone, which offer subtle differences aesthetically, and all are produced to the highest technical standards.

At Marshalls, our product and service portfolio is designed to provide today’s responsible housebuilders with an extensive choice of quality products. As the UK’s leading landscaping company, we have the depth and range of products and expertise needed in order to meet the developing challenges facing those constructing new homes.

Due to the wide range of colours and textures, block paving has been the product of choice for driveways and public spaces across the country, also available as a permeable option, proven to mitigate the risk of flooding, thereby meeting the sustainable drainage guidelines for new developments.

Our flag paving designed in accordance with building regulations Part M 2015 enables housebuilders to meet 900mm pathway requirements whilst offering a variety of colours and finishes for all budgets.

Complementary coloured edgings and an extensive selection of functional kerb units are available to complete any project.

Housing Landscape Solutions

Mortars and Screeds

Marshalls has a wide-ranging and continuously expanding selection of mortars, screeds, renders and modified sands.

With a growing network of plants, our position as market leader for ready-to-use mortars and screeds continues to strengthen, with experienced specialists available to advise you on product information, prices and availability.

As well as a range of standard mortars, we have a wide variety of coloured mortars available. Whether you want a close match to your choice of walling, or a complete contrast for an eye-catching statement, there’s sure to be one that’s ideal for your scheme.

Standard & Coloured

CROMWELL WALLING

Marshalls' fine face Cromwell Walling is manufactured using Yorkstone aggregates to closely replicate the visual and textured characteristics of natural stone. Cromwell Walling successfully achieves the visual impact of random and varying sizes of natural stone walling, whilst providing the consistency of modern production methods.

CROMWELL WALLING | Customise your project

Our simple, step by step guide breaks the specification process down into three easy to follow points. Choose your ideal face, colour, then coordinating mortar to create your perfect walling scheme.

Step One
Choose your face type

The face type is the shape of the block and can alter the look and feel of a scheme.

Pitched
Pitched face walling has a single effect and each block displays a distinctive raised centre

Rustic
Rustic Walling gives finished walling a rounded, softer and less defined finish, replicating the appearance of older, reclaimed natural stone walling.

Split
For applications where a flatter, less prominent texture than a pitched face is required.

Step Two
Choose your colour

The colour is defined by the type of aggregate used in the mix.

Buff
Natural buff
Brown
Ash

Step Three
Choose your mortar

Buff Brown Weathered Ash
Recommended mortar
Recommended mortar
Recommended mortar
Recommended mortar

The face type is the shape of the block and can alter the look and feel of a scheme.

The product type is the range of course heights and length options. The wide variety of course heights and stone lengths offered means that the finished walling has all the characteristics of random length natural stone walling.

Range and Variety

• Stones are manufactured in a range of course heights and length options. The wide variety of course heights and random length offering means that the finished walling has all the characteristics of random length natural stone walling.

Please visit www.marshalls.co.uk/walling for stock availability

Walling slips

Cromwell is also available as a slip that can be mounted onto a block for faster installation.

Performance

• Conforms to BS EN 771-1:2011+A1:2015
• Exceptionally low water absorptive properties

A hydraulically pressed unit results in low water absorption which guarantees a long-term, high quality finish. This also ensures the visual appearance is not degraded over time by frost attack or ingress of surface grime.

• High crushing strength and density

Suitable for both load bearing and non-load bearing applications.

CAST STONE

From three cast stone manufacturing facilities, Marshalls offers a range of Semi Dry, Wet Cast and Fibre Reinforced (FRCS) architectural stone units that have been used on residential and commercial projects throughout the UK.

The range is designed to replicate the palette of natural stones available throughout the UK. From a white Portland stone used in the south, through to buff Yorkstones seen throughout Yorkshire and even red sandstones used in the north of England and Scotland.

All of Marshalls’ cast stone products are carefully mixed using natural aggregates to ensure the finished unit is a close match to the quarried material.

Fibre Reinforced Cast Stone (FRCS)

Decorative, non-structural units are available in FRCS, an innovative mix that incorporates fibre reinforcements for additional strength. This added strength means the unit can be stripped of weight to ease installation.
INSPIRE WITH PATTERN

Our walling products come in a range of different size blocks. Using alternating courses of different size blocks can add visual interest to your project.

READY-TO-USE MORTARS

Mortar is a vitally important part of every construction project, from general brick and blockwork to major housing sites, retail, commercial and public sector developments and civil engineering projects. Our ready-to-use mortar should be planned in at an early stage of your project.

Ready-to-use mortar is a factory-produced material that, as its name suggests, ready to use at the point of delivery. It requires no further additions or mixing, and is fit for use straight from the tub for a minimum of two days.

Consistency in colour, workability and performance is assured, and our durable, refillable mortar tubs are a space-saving solution for storage.
For little additional cost, coloured mortars can help you achieve significant aesthetic improvements to your project. Coloured mortars can be used to create elegant effects and add significant kerbside appeal, as well as perceptible quality finish to brickwork.

We provide a free colour matching service and can supply samples to allow effective on-site colour approval, as well as offering convenient delivery or collection options from small quantities to bulk loads.

Our coloured mortars are competitively priced, and we offer extensive UK coverage.

QUALITY

Ready to use mortars are manufactured to the requirements of BS EN 998-2 under a quality scheme certified to ISO 9001.

SET RETARDED FOR EASE OF DELIVERY, USE AND STORAGE

Air entraining admixtures are utilised in our mortars to provide the desired plasticity, reduce bleeding and provide increased frost resistance in its hardened state.

ALL STRENGTH CLASSES ARE AVAILABLE

See the adjacent tables.

CONSISTENT PRODUCT PERFORMANCE

Quality control and testing ensure the mortar specified will exceed the minimum strength requirements and provide greater consistency than site mixed mortars.

MINIMAL SITE ACCESS REQUIREMENTS

Delivered direct to site or collected from your local depot, in small or large quantities at competitive prices.

NO SPECIALIST TRAINING OR SITE REQUIREMENTS

All work should be conducted in accordance with the latest British and European Standards and Codes of Practice.

SCREEDS

Our Screeds range consists of both traditional and liquid products. The factory-produced ready-to-lay screeds and specialist screeds are designed to provide a durable, high-quality floor levelling solution to suit a wide range of domestic and trade applications.

Our product range features traditional screeds, fibre-reinforced screeds, fast drying screeds, thin-layer screeds, self-bonding screeds, heavy-duty screeds and tile-bedding screeds.

All our ready-mixed screeds comply with relevant British and/or European standards and can be delivered direct-to-site or collected in your own vehicle from a national network of production units.
**Premfloor**

Marshalls Premfloor is a free flow, pump applied screed made with an anhydrite binder in place of cement making the product easier and faster to lay. It is also thinner than conventional screeds making it the natural choice for underfloor heating systems. Floors are suitable for foot traffic within just 24-48 hours, while drying takes just 40 days, or sooner with force drying (available only for 7 days).

Marshalls Premfloor is ideal for a wide range of screed applications. Its high thermal conductivity and minimum thickness make it ideal for use with underfloor heating. Furthermore, because it’s free from protein and doesn’t harbour potentially harmful bacteria, it’s an excellent choice for hospitals and care homes.

Marshalls Premfloor is manufactured to the requirements of BS EN 13813 under a quality scheme certified to ISO 9001 and is regularly tested to the requirements of the latest British Standards. All our raw materials conform to British and European Standards to ensure quality and consistency.

**BENEFITS**

- **Fast installation:** 2,000m² can be laid in just one day
- **High Strength:** Requires no reinforcement or manual compaction
- **Versatility:** Suitable for unbonded, bonded or floating construction
- **Low Shrinkage:** Less prone to shrinkage than sand cement screeds
- **Sustainable:** 35% recycled content
- **Surface finish:** Surface regularity to SR2 and capable of all receiving floor covering

**APPLICATION**

- Sub-floor levelling
- With or without underfloor heating
- Unbonded, bonded or floating construction
- New build or renovation
- Residential or commercial floors carrying pedestrian traffic within BS 8204 classification
- Compatible with the majority of timber frame construction systems due to its density at 40mm thickness (80kg/m²)

**Cemfloor**

Marshalls Cemfloor is a pump applied screed made with a cement-based binder and specially formulated additives in conjunction with McGraths Limestone (Cong) Ltd & Cemexa Technologies of France.

Floors are suitable for foot traffic within just 24-48 hours, while tiling can be undertaken as early as ten days after installation.

Marshalls Cemfloor is ideal for a wide range of screed applications, its class leading thermal conductivity and minimum thickness make it ideal for use with underfloor heating.

Marshalls Cemfloor screed is manufactured to the requirements of BS EN 13813 under a quality scheme certified to ISO 9001, and is regularly tested to the requirements of the latest British Standards. All our raw materials conform to British and European Standards to ensure quality and consistency.

**BENEFITS**

- **Fast installation:** 1,000m² can be laid in just one day
- **High Strength:** Requires no reinforcement or manual compaction
- **Versatility:** Suitable for unbonded, bonded or floating construction
- **Minimal shrinkage** - less prone to shrinkage than sand cement screeds. Typically bay sizes of up to 150m² without the need for construction joints
- **Surface finish:** Surface regularity to SR2 and capable of all receiving floor covering

**APPLICATION**

- Sub-floor levelling
- With or without underfloor heating
- Unbonded, bonded or floating construction
- New build or renovation
- Residential or commercial floors carrying pedestrian traffic within BS 8204 classification
- Compatible with the majority of timber frame construction systems due to its density at 40mm thickness (80kg/m²)
### SCREEDS | Traditional

#### High Performance

**PREMIER**
Premier Screed is a performance product, offering fast-drying properties for time-critical projects where earlier access, trafficking or final finishing is required.
Premier Screed is a high-quality factory-produced screed, which contains polypropylene fibre reinforcement as standard.
High Performance Screed is a rapid-drying, semi-dry sand/cement screed aimed at time-critical projects.
Where standard screeds typically dry at 1mm of depth per day, high performance screeds dry at 3mm of depth per day giving substantial time savings to site programmes.

**PREMIER HD**
PremierHDScreed is a heavy-duty version, aimed specifically at the industrial and commercial sectors, where increased loading or trafficking may be a factor.

#### POLYMER

Our Polymer Screed incorporates styrene-butadiene rubber (SBR), which is a synthetic rubber copolymer, consisting of styrene and butadiene. SBR is known to have excellent abrasion resistance and ageing stability properties.
Polymer Screed is a self-bonding product, which provides high performance at reduced thickness. It is widely used as a flooring underlay and infill screed and is particularly good for achieving falls to drainage systems or levelling falls. Shrinkage and cracking is reduced, permeability is minimised and flexural strength is improved.
Our Polymer Screed is competitively priced and we can offer a range of convenient delivery options from small quantities to bulk loads, covering the majority of the UK.

#### RETANOL

Retanol screed is a factory batch floor screed designed to allow the installation of fast track, low shrinkage and low tension bonded, unbonded and floating cementitious floor screeds.
The vastly reduced drying times enables the final floor finish to be installed much earlier, allowing foot traffic after 24 hours.

### SCREEDS | Traditional

#### Standard

Our product range features traditional screeds, fibre-reinforced screeds, fast-drying screeds, thin-layer screeds, self-bonding screeds, heavy-duty screeds and tile-bedding screeds. Please require additional information as necessary, or contact us to discuss your specific screed performance requirements.
All our ready-mixed screeds comply with relevant British and/or European standards and can be delivered direct to site or collected in customers’ own vehicles from a nationwide network of production units.

#### FIBRE

Our factory-produced ready-mixed Fibre Screed features polypropylene strengthening fibres mixed throughout the product.
The use of fibres increases tensional strength, impact resistance and overall durability, whilst inhibiting plastic shrinkage cracking, settlement cracking, and thermal cracking induced by freeze/thaw cycles.
Background

The Lindley Park development near roundhay field street, near the town of huddersfield, west yorkshire, is now a well-recognized landmark in the local landscape. the scheme wanted to incorporate materials that would provide a sympathetic addition to the surrounding open countryside and wide horizons, whilst also utilizing local materials.

Solution

The buff colourway of marshalls’ cromwell walling provided a complementary aesthetic to the neighboring yorkshire landscape. this reconstituted walling material is manufactured using locally quarried yorkstone aggregates to closely replicate the visual and textured characteristics of natural stone. the complementary neutral-toned mortar creates a beautiful blend with the units to allow the characteristic exposed aggregates of the stone to be the focal point.

the use of buff yorkstone aggregates ensures the base colour is intrinsically maintained, replicating the appearance of natural stone at an affordable price, and as cromwell is manufactured using a hydraulic press, it has low water absorption which guarantees a long-term, high quality face appearance. the pressing process also ensures that each unit is of very high density, which minimizes any issues in the secondary processing of the product, resulting in time savings on site due to dimensional precision.

Outcome

The final scheme includes a superb selection of attractive, high quality modern houses and apartments into a popular residential neighborhood.

The combination of the reliability and consistency of contemporary production methods with a traditional natural stone product has created a modern yet characterful housing scheme in a delightful rural environment.
Case Study - Leicester Tigers RUFC

As part of the £60 million redevelopment of Leicester Tigers RUFC’s Welford Road home, Marshalls were approached to provide a mortar solution for the new stand.

The first phase of the development was to facilitate space for 10,000 spectators in a new stand called Granby Halls Side, taking capacity up from 17,498 to 24,000. After full renovation it will have a capacity of above 30,000.

In October work began on the construction of the new north stand - called the Caterpillar Stand after the club’s main sponsor. The Caterpillar Stand has room for 10,000 spectators along with a 1,000 seat hospitality suite. The Main Contractor was Galliford Try Plc based in Wolvey. The Sub Contractor was Hodgkinson Builders Merchant Ltd based in Derby.

Marshalls supplied 327m3 of M4 / M12 RTU Mortar and at the height of the project was delivering 7m3 per day servicing 21 bricklayers and 2 labourers.

The site agents John Schofield and Mark Payne were initially sceptical about the suitability of ready to use mortar for their project but were extremely satisfied with our service and quality throughout the project and would not have any hesitation in using Marshalls again.
With customer service at its heart Marshalls has continued to invest in logistics when others have cut back, ensuring that the company has the capability to continue to deliver products to our customers when, where and how they want them.

- 180 vehicles in total, state of the art and fully equipped
- Moffett trucks available
- State of the art logistics software
- Vehicles GPS enabled and trackable allowing positional updates every 2 minutes
- Vehicle status and sales demand optimised every 15 minutes
- Experience and expertise in on-site manual handling

Due to its vast operations, 97% of Marshalls customers are within a two hour drive of one of its UK sites. This continues to be a key competitive advantage.

Marshalls has manufacturing plants, quarries and distribution sites across the UK and a site in Belgium.

Due to its vast operations, 97% of Marshalls customers are within a two hour drive of one of its UK sites. This continues to be a key competitive advantage.

Marshalls invests in cutting-edge machinery to continue to produce products for both the public sector and commercial and domestic end markets.

The company is committed to achieving the highest standards of environmental performance and works to minimise the environmental impacts of its operations on site, ensuring that all of its operations meet, or exceed the requirements of legislation and applicable best practice.

Each operating site is assessed on its activities on an annual basis and objectives and targets are set with the view to improve the environmental performance each year.
