

## INSTALLATION DETAILS FOR MARSHALLS' GREEN-AWAY

### Health and Safety Information

Safe working practices should be employed at all times during the construction process and all necessary Personal Protective Equipment (PPE) should be worn.

### Before you start

Dilute 1-part product with 5-parts water into a readily available garden sprayer. Marshalls' GREEN-AWAY should always be added to the water. This is a guide only and strength may be increased to treat excessive contamination.

### Using Marshalls GREEN-AWAY

Marshalls' GREEN-AWAY should be applied in dry conditions. Thoroughly saturate the dry surface with Marshalls' GREEN-AWAY and leave to activate. Ideally the best time to apply would be late afternoon to avoid immediate evaporation and pedestrian traffic. Do not apply if rain is forecast within 6 hours of applying Marshalls' GREEN-AWAY.

You do not need to do anything else to the surface

**DO NOT** hose down the product once treated

**DO NOT** scrub or sweep the product once treated

Keep pets and people away from the treated surface until completely dry.

The surfactants in the product will work on surface mould, lichen and algae in conjunction with the natural weather elements to slowly gently remove the contamination from the treated surface. Marshalls' GREEN-AWAY will re-activate every time it rains or moisture is present in the air,

**Please note** Depending on the nature of the contamination and prevailing weather conditions, it can take 6-12 months for stubborn contamination to be removed from the surface.

### Maintenance

Marshalls' GREEN-AWAY can be applied in 3/6/9/12 monthly intervals after initial application, dependent on the level of contamination and sight of any new contamination.
