- Durable mild steel or corten material
- Available in various RAL colours and fossil corten effect finishes
- Can be incorporated with protective RhinoGuard® technology
- Surface mounted providing easy installation with limited disruption
- Supplied with relevant support brackets and connections

DESIGN OVERVIEW

CREATE INVITING LANDSCAPES

Designed and manufactured in the UK, the Perennial Planter System provides an excellent way to introduce planting with combined seating into outdoor spaces.

Using a series of connecting panels that can be curved or straight and of varying heights, the bespoke planter solution allows for unlimited design capabilities which can be tailored to complement your scheme's individual requirements.

The Perennial Planter System is available with the option of FSC® -certified timber seating which is seamlessly integrated within the design to provide an area to sit and relax.

DESIGN OVERVIEW

UNLIMITED CAPABILITIES

The Perennial Planter System offers limitless design opportunities allowing you to create functional and attractive combinations to complement the surrounding landscape.

Characterised by a mild steel or corten retaining structure, the addition of seating provides a practical and fully coordinated design which can be created in a number of layout combinations.

With the option of powder coating in any standard RAL or ADAPTA fossil effect finish, your desired look is easily achievable.
