Introduction

Marshall's is the UK's leading manufacturer of hard landscaping products and has been supplying superior natural stone and innovative concrete products to the new house build, home improvement and landscape markets since the 1890s. Marshall's strives to create products that improve landscapes, create better environments and develop happier and healthier communities.

Marshall's understands how landscaping can dramatically increase the profitability and saleability of the homes you are building. This brochure offers an overview of the products and services available to house builders from us. From product and design advice to specific sub-base design and engineering solutions, intended to reduce cost and complexity in your landscaping. Read on to learn more about what Marshall's has to offer to help you complete and sell your properties.

This brochure offers just a snapshot of the products Marshall's offer. For more information please visit our website:
www.marshall's.co.uk/house-builders

“ It takes potential homebuyers less than eight seconds to decide whether or not they like a home... ”

Marshalls can help you add value to your property for those all-important first impressions

Discover all the ways we can help you with your development, from adding kerb appeal and design advice to pricing and deliveries.

How to add Kerb appeal with Marshalls

Kerb appeal sells houses and helps sell them at a premium.

Before your customer has even set foot inside one of your homes, they'll have visited one of your nearby sites to see the quality of workmanship they might expect. According to research, **it takes potential homebuyers less than eight seconds to decide whether or not they like a home.**

A well-designed and carefully installed development is the best possible advertisement for the home you are trying to sell. First impressions count in this hugely competitive market.

The exterior and landscaping of a development is frequently at the bottom of a developer's priority list, but investing in your developments kerb appeal can make a real difference to the value and potential profitability of the homes you sell, as well as create a sense of community and individuality on your plot.

With our product and design experience, Marshalls really understand how premium, high-spec, driveways, patios and access roads could make the difference to the perceived value of an estate.

"It takes potential homebuyers less than eight seconds to decide whether or not they like a home..."

It's worth bearing in mind that surfacing materials frequently cost as little as 20% of the installed cost of a pavement, driveway or road, so a few pounds per square metre on blocks or flags will make little difference to the overall cost of the installed system but a huge difference to the look and feel of the estate you are building.

That perceived kerb appeal will not only help you drive the initial interest and desire for your properties, it will help you command higher price points.

If you engage with Marshalls during the planning stage of your scheme, you'll receive sound, warranted product and design advice as well as drive significant cost out of the build. Doing this will ultimately free up budget for architects and designers to be just as creative on the outside as they are on the homes interior, helping you on those all important first impressions.

An example of an entrance path in a standard product vs an entrance path in a Marshalls upgrade product

Did you know...

Putting this into context, moving the small step to a better surfacing product is not as expensive as you may think. For as little as £40 per plot you could transform the look and feel of your property from a standard house into a stunning, premium property that is set apart from the rest.

How we can help

Marshalls can help you add kerb appeal for those all-important first impressions. We have the product knowledge, advice and tools available to really make the most out of your plot of land.

With us, we can help you add value to your properties without breaking the bank. With pricing, design to delivery, we can assist you at every step of the way. Detailed here are some of our teams and services that are available to house builders.

We have a team of **Installer Development Managers** up and down the UK, experienced in project development and Marshalls products.

Discover our Water Management products on page 22.

- **Driveline Drain®** - our patented and innovative concrete drainage system
- **Priora** – Permeable paving that allows surface water to soak into the ground below. We have ranges available in different styles, sizes and depths making them suitable for heavily trafficked access roads or private driveways
- **The Mono Beany** - connects to the sewer system
- **The Drexus Drains** - connects into a soakaway to drain back into the ground or discharge off the plot into the same sewer as the Mono Beany
- **Perfect Manhole or Soak Away**

Driveline Drain®

- Meets the British Standard B125 for loading requirements
- Great aesthetic and a drainage solution that is stronger than metal or plastic alternatives
- Straight forward to install and maintain using matching accessories

Save money with Design

All areas of the construction sector are being subjected to ever-increasing levels of financial pressure and new housing developments are no different. Marshalls believe that in order to make block paving the first choice for all hard standing requirements, we must strive to make the design and installation of these systems as cost effective as possible.

All of the external works (such access roads or driveways) have a function to perform. Primarily they're there to do something; to provide durable, hardwearing surfaces that will for example support heavy loads, withstand collisions and stay looking good for years to come. The surfacing of these features – the element you can actually see – is frequently just a small element of the structure. The majority of the cost of landscaping is frequently hidden beneath the surface; the structural layers that provide the functional robustness of the installed system. Cost analysis on pavements, for example, demonstrates that the surfacing element makes up just 20% of the total cost of the system.

Working out how to reduce the cost of the sub-structure will bring far greater financial gains than cutting corners on the surfacing material. Ensure that the sub-structure at the core of your external works will serve its purpose without being overspecified and you're likely to be able to fund the kind of beautiful finish that will sell developments. sense of community and individuality on your plot.

With our product and design experience, Marshalls really understand how premium, high-spec, driveways, patios and access roads could make the difference to the perceived value of an estate.

Marshalls has recently undertaken a major project with Professor John Knapton, one of the worlds leading structural engineers, to reinvestigate the design advice we offer our customers. We used a combination of laboratory testing, desktop analysis, Professor Knapton's worldwide experience, and in-situ data from over 20 years of successfully installed projects to arrive at a series of findings which now make a block paved access road or driveway more cost effective than ever.

Our Design Models

Marshalls have introduced 11 New Design Models, ranging from light domestic to a heavy duty 'ports and docks' option which eclipse the six covered by the British Standard. This means that our designs are more prescriptive than ever before, and ensures that the designs we create are less likely to be overspecified compared to the British Standard.

Rationalised Sub-Base Design – by improved understanding of the needs and requirements of our customers developments, we can now reduce the depth of the majority of our designs while still providing the necessary level of structural integrity.

So, by working with Marshalls, we collectively can help drive cost out of structural designs, freeing up funds to spend on premium, great looking surfacing that will help you to sell your developments quickly – and at the right price.

Sub-Base Design Services Could we save you money?

British Standard Design

Build up:
80mm Block
50mm Laying Course
350mm Sub-base (OGCR)
Total Depth = 480mm

New Marshalls Design 31% shallower than the BS

Build up:
80mm Block Same as BS
50mm Laying Course Same as BS
200mm Sub-base (OGCR)
Sub-base 43% shallower than BS
Total Depth = 330mm

*Example used: Cars & Light Vans (or equivalent), 5% CBR

Benefits of Sub-base Design:

Environmental: less energy used in excavation, less waste to dispose of and less aggregate all add up to reduce the carbon footprint of your project.

Practical: In areas where excavation is limited (to avoid services, for example), our new designs frequently make a block paved surface a realistic option where it wasn't before.

Financial: Crucially, our new design models combined with our rationalised sub-base designs drive cost from the sub structure, making block paving a more cost effective option than ever before. freeing up budget so your architects and designers can be as creative with the outside space as they have with the homes themselves.

The Marshalls House

Marshalls has a wide range of products suitable for different applications, styles and budgets. There are plenty of things to consider for your new build properties, we can take you through appropriate products for the following areas of your project:

- Access roads
- Pavements
- Driveways
- Patios
- Walling
- Mortar
- Water management
- Landscape protection & Street Furniture
- Complementary & accessory products

Speak to us to learn about the wide range of products we have available for your new housing project.

The right product for you

Marshall's has a wide range of products suitable for different applications, styles and budgets. There are plenty of things to consider for your new build properties, we can take you through appropriate products for the following areas of your project:

- Access roads
- Pavements
- Driveways
- Patios
- Walling
- Mortar
- Water management
- Landscape protection & Street Furniture
- Complementary & accessory products

Our Installer Development Managers can offer product advice that is suitable for your specification. Whether you require products to match your look or budget (or both), we have the expertise in a wide range of options:

Prestige homes

For those unique, grand design projects, we have a range of high-end, premium products that will make a feature of the property exterior.

First time buyers

Why should price compromise on appearance? If your budget is stretched, we have a range of products that are low-cost, practical and functional.

Low maintenance homes

If you're building houses for families or people with pets, we have low maintenance paving and Artificial Grass options that are great for those fast-paced and busy households.

Contemporary style homes

If your property is sleek and modern, we have products available in a range of materials and price brackets that will complement your contemporary property style.

Traditional style homes

Traditional but timeless. If your new build requires warm tones and aged-looking products, we have options that will help your property look new and homely on the outside.

To learn more about our product options and find the perfect match for your property exterior, speak to your local Installer Development Manager. To find your local Marshall's representative call the Domestic sales teams on **0345 30 40 707** or email **domestic.sales@marshalls.co.uk**

Access & Estate Road Products

We have a range of products suitable for medium to heavy traffic in residential areas. You can source your kerb and paving from Marshalls to suit your style or budget.

KEYBLOK

A highly popular and attractive option for a wide variety of open spaces and urban landscapes, Marshalls Keyblok is the UK's best-selling concrete block paving. The range offers 200 x 100mm rectangular block pavers in a choice of 60mm and 80mm thicknesses.

- Ideal for landscape projects
- public spaces and driveways
- Various colour options available
- Suitable for any loading requirements
- 60mm or 80mm block paving

BRITISH STANDARD KERB

This sleek, highly durable and precision-manufactured concrete kerb system has been incorporated into highway schemes up and down the UK. Manufactured to the dimensions required in BS EN 1340:2003, this product is available with a wide range of ancillary products to allow for seamless integration with a minimum of cuts.

CONSERVATION X KERB

Marshalls' Conservation X kerb is high in strength and precision-manufactured before going through a secondary shot texturing process. This gives it the appearance of exposed granite aggregate, and you can choose from either cream, charcoal or silver grey kerbing. Furthermore, almost half of its manufacturing is done using recycled materials, so this is a product which offers both durability and sustainability.

Building Walling

For all types of building projects, Marshalls provides a broad range of reconstructed stone walling products together with advice and guidance from the beginning to the end of each job. Available in various colour tones, reconstructed stone walling can be provided in tumbled walling finishes.

Click here to view our full commercial walling range

CROMWELL RECONSTRUCTED STONE WALLING

For the appearance of natural stone walling at an affordable price, Cromwell Stone Walling from Marshalls is an ideal choice. A reconstructed walling stone, it uses Yorkstone aggregates quarried from the same natural sources as those used for natural stone walling to closely replicate the visual and textured characteristics of natural stone.

Suitable for load-bearing and non-load-bearing use, the hydraulic press manufacturing process results in low water absorption, ensuring the high-quality appearance is maintained over a long-term period.

Bricks & Masonry

Marshall's Bricks & Masonry offer a comprehensive range of brick, walling stone and architectural masonry to suit all styles, budgets, applications and technical criteria.

ENGINEERING BRICK

Engineering Bricks are durable, high strength bricks, specially manufactured to accommodate high loads and cope with exposure to aggressive ground conditions.

COMMON BRICK

Our Common Bricks are designed to be used for all types of construction above and below dpc level, independently or in conjunction with dense aggregate blocks.

FACING BRICK

The range of Facing Bricks we have has developed over a number of years, ensuring that we provide a range for every specification, every price range, every customer.

WALLING STONE

Darlstone is simple and economic to use and is able to create a random coursing aesthetic to masonry as well as contributing scale, colour, texture, a sense of permanence and that all important kerb appeal.

CAST STONE

Synonymous with reconstituted stone, Grecon cast stone is used to form openings, entrances, walling and other features in the masonry façade. It fits in with both contemporary and period styles and complements a range of cladding materials from stone and brick to render

Mortar & Screed for Building Projects

Marshall's has a wide-ranging and continuously expanding selection of ready-to-use mortars and screeds. With a growing network of plants, our position as market leader for ready-to-use mortars and screeds continues to strengthen, with experienced specialists available to advise you on product information, prices and availability. As well as a range of standard mortars, we have a wide variety of coloured mortars available. Whether you want a close match to your choice of walling, or a complete contrast for an eye-catching statement, there's sure to be one that's ideal for your scheme.

All our mortars are regularly tested in line with British and European standards.

Permeable Paving

At Marshalls, we specialise in permeable concrete block paving. This is because we understand the importance of effective drainage systems in heavily trafficked and domestic areas to help reduce the risk of local flooding.

When you choose Marshalls' permeable paving, you will find it works differently to typical paving materials. It is designed to allow rainwater to filter through the joints in the surface, trickling through to a specially prepared sub-base below the paving stones.

We believe that such systems should never impinge on the detail and design of your finished project, therefore our popular ranges are aesthetically pleasing for roads and driveways.

access road range

PERMEABLE DRIVEWAYS:

We have a variety of options suitable for driveway loadings that work accordingly with Government legislation, such as Drivesett® Argent® Priora®, Drivesett® Tegula® Priora® and Driveline® Priora®.

PERMEABLE ACCESS ROADS:

For roads that have heavier loading requirements, we have a range of permeable options that come in different sizes and finishes, including Tegula, Coppice and Conservation X Priora Block.

Driveline Drain®

Driveline Drain® is our patented and innovative concrete drainage system, which is designed to help reduce the risk of flooding and surface water.

Compliant to the British loading standard B125, this product works on driveways specifically and is designed to complement both contemporary and traditional styled projects. Providing a more attractive solution compared to metal or plastic drainage alternatives, it adds to the kerb appeal of a new build property.

Straightforward installation makes it easy to finish off your block paving driveway project with this concrete drainage. Easy maintenance is achieved through using the matching accessories to allow easier access into the drain.

Water Management | Precast | Retaining Walls

Marshalls CPM has developed a range of solutions for water management including harvesting, storage, flow control and treatment. Precast concrete pipes and tanks will not puncture under pressure and with the minimal risk of algae growth there is no impact on the efficiency of pumps and valves within the storage tank.

Landscape Protection & Street Furniture

Marshalls offer a design led approach to protective and non-protective street furniture which blend seamlessly into landscape design, creating spaces where people want to spend time.

ALBION SLIMLINE LITTER BIN

A functional and versatile bin now available as a slimline option in two capacity sizes; 90L and 160L.

The litter bin can be customised with optional extras such as an ashtray and/or finished in a livery of your choosing.

ALBION SQUARE LITTER BIN

The Albion Square Litter Bin is manufactured from robust 2mm Zintec steel and 5mm base and is powder coated in black as standard with other RAL colours available on request.

Supplied with a galvanised steel liner, the litter bin is available in a choice of capacities from 90L through to 160L to suit your requirement.

CLASSIC ROUND LITTER BIN

Offering a natural aesthetic, the Classic Round Litter Bin is manufactured from treated hardwood which is set around a steel frame.

The steel is zinc plated before being finished with polyester powder coating and the hardwood is treated with a natural shade varnish.

Offering a 48L capacity, the litter bin comes with a galvanised steel liner and is available in a range of standard high gloss RAL or matt textured Sable colours.

Here are some of the colours available.

PEDESTAL ACCESSORIES

Pedestals have been designed to create a structurally robust 'floating floor' system which is ideal for use with all Vittrified, Natural Stone, and Concrete paving. Ideal for use on terraces, balconies and patio makeovers where a stable base is already present.

- Pedestals are a robust laying solution that provides even weight distribution, spreading the load evenly across the base material.
- No fixings required
- An incredibly quick and easy way to refresh an outdoor space
