

**Landscape Protection** 

**Inspirational HVM Solutions** with inner strength and outer beauty

Keeping people safe... not scared®

# About Marshalls

Marshalls has been manufacturing hard landscaping materials for over 130 years and has become the leading supplier of products that create our urban environment. This has been achieved through progressive product innovation and demonstration of outstanding customer service levels. This privileged position will be sustained by continuous investment in the Marshalls brand, the products, and the people.

Proudly celebrating over 10 consecutive years as a Superbrand At Marshalls, we work together as one team, guided by strong principles, to operate in the most ethical and sustainable way. We do the right things, for the right reasons, in the right way. This is the Marshalls Way.

### **Act with Courage**

We Act with Courage by taking responsibility for every action. We persevere and face things head on with a 'can do' attitude. We're proud of our depth of experience, but we're humble enough to never stop learning.

## **Shape the Future**

Operating in the most ethical and sustainable way is a commitment we make to our customers, partners, stakeholders and the communities where we operate. We keep this commitment by considering the long term impact of every single decision we make. We recognise that we can Shape the Future by putting people, communities and the environment first.

> We don't take our lead from change, we initiate and embrace it.

#### We Win Together

We Win Together by continuously developing our business and our Marshalls people. We strive to meet the needs and expectations of our customers and stakeholders. We break down boundaries by proactively proposing solutions, and we do this together with respect for each other.

### **Inspire with Clear Purpose**

We set clear expectations for those we work with and for ourselves. We Inspire with Purpose, letting our passion and pride shine! We're motivated by our own high standards to deliver market leading quality to our customers. We know that brilliance comes from every single one of our people being able to contribute to our vision of Creating Better Spaces and Futures for Everyone.

# Landscape **Protection**

Marshalls Landscape Protection offers a design led approach of Secured by Design Hostile Vehicle Mitigation security products enabling highly effective protection to blend seamlessly into urban landscape design; allowing architects, planners and designers to install security measures without instilling fear.

In most cases, crash-tested products are developed with minimal consideration given to the design, however Marshalls has flipped this on its head and taken a range of aesthetically designed street furniture products and incorporated protective RhinoGuard® technology within to create inner strength and outer beauty.

Our products are

Security products don't need to compromise on **the aesthetics** of a landscaping project.

We believe in the importance of creating safe, attractive and inviting environments, and regenerating spaces where people want to spend time, where people feel safe, not scared.

## Our approach to sustainability

We help to build safe, sustainable and beautiful spaces for everyone.

Our approach to sustainability is underpinned by our belief in doing the hard work in areas that are material to our business and our stakeholders, by working with leading organisations and by getting external validation.

**ISO50001**, which we achieved and maintained since 2015, enables organisations to establish the systems and processes necessary to continually improve energy performance

SBTi targets to reduce Scope 1 and 2 greenhouse gas emissions 40% per tonne of production by 2030

100% of our employees are paid at, or above, the Living **Wage Foundation level** 

All our production plants now use 100% renewable energy

We are proud to have been FSC®-certified since 2017.

All newly developed Marshalls and RhinoGuard® street furniture products that include wood elements, from now on will be produced using FSC®-certified (FSC-C133609) hardwood and softwood timber from well managed forests and other controlled sources.

Further detailed reviews are currently underway that will seek to replace any lumber with FSC®-certified wood wherever possible

We launched the highly regarded Power of **Logistics** programme to tackle Modern Slavery and led the sector in tackling the issue in the UK

We have eradicated child labour from Tier 1 of our Indian Sandstone supply chain – this is really important to us and our commitment to respecting **human rights** is central to our business

All our Marshalls branded Landscape Protection and Street Furniture products are made in mainland Britain

We achieved, and have since maintained, **ISO14001 Environmental Management since** 2000. The intention of **ISO14001** is to achieve a balance between the environment, society and the economy. This international standard provides organisations with a framework to protect the environment and respond to changing environmental conditions in balance with socio-economic needs

The concrete and natural stone we use to make our products are recyclable

We're proud to pay our fair share of tax – we've kept the Fair Tax Mark since 2015

Our developments in design, manufacture and technology negate the need for bulky and obtrusive security, enabling those who design our city spaces to think more creatively about how they can include Hostile Vehicle Mitigation within landscape design features.

Our environment impacts everything we do. The better our environment, the better we can be. Our aim is to help create a safe and aesthetically pleasing environment where people want to spend time.

Marshalls' integrated **Landscape Protection** approach involves the application of **creative** thinking, using our engineering and design know-how to create spaces that are safer by design from the outset.

# Protective, aesthetically pleasing security

The terror threat posed to the public has evolved dramatically over the last few years. Large-scale, meticulously planned bomb attacks have given way to vehicle assaults that target pedestrians. Our products help protect and enhance our landscape environments, safeguarding people, buildings and the spaces they occupy from multiple levels of threat, whether they are accidental collisions, criminal ramraids or terrorist attacks.

We believe that those in charge of specifying for security must assign a greater role to design aesthetics when it comes to choosing products to prevent vehicle attacks.

Concrete blocks and barricades have previously been common methods of security used to protect areas of high footfall, such as city centres, airports and sports stadiums. These approaches of security make spaces feel hostile and heavily defended.

Ideally, protective measures should be so well integrated into scenes that uninitiated passers-by don't realise they have been put in place for their protection, **keeping people safe...** not scared®

## **Inner strength** and **outer beauty**

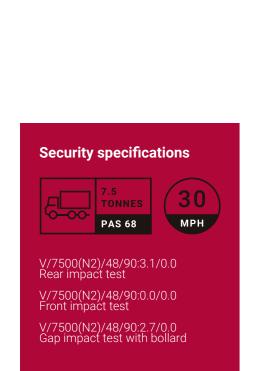

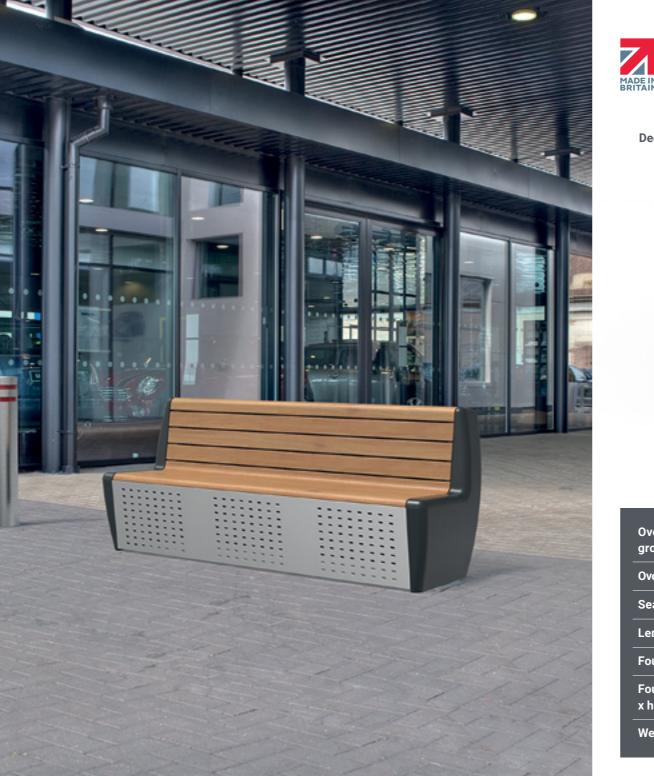

# **RhinoGuard**® **EOS Seating**

The multi-purpose RhinoGuard® protective EOS seat combines form, function and strength, offering not just a contemporary seating solution, but also security and resilience for a range of applications.

The seat frame has been successfully crash tested at 3 different scenarios using a 7.5 tonne vehicle travelling at 30mph, giving full reassurance of its inner strength.

Constructed using FSC®-certified Iroko timber and Ferrocast®, known for its resilience, a variety of looks can be achieved with a range of colour options, in order to suit the requirements of any scheme.

#### Ferrocast®

Seat ends available in any standard RAL colour. Bespoke design options are also available

# RhinoGuard<sup>®</sup> **Igneo Seating**

Vehicular-borne threats are a reality in many modern urban environments and with the RhinoGuard® Igneo Protective Seat, safety and security combined with a subtle visual appeal can be achieved.

Crash tested on two occasions, pinpointing different locations of the seat, Igneo can successfully withstand impact from a 7.5 tonne vehicle travelling at 40mph.

Manufactured using precast concrete, Igneo is available in 4 colour variations, all finished with an anti-graffiti coating. The optional armrests are manufactured using Ferrocast®, known for its resilience. These are available in a range of RAL colours in order to achieve the look you desire.

The RhinoGuard® Steel GateKeeper® provides temporary protective measures for a number of applications such as Christmas markets or sporting events.

The steel variation has been successfully crash tested to IWA 14.1, providing protection against vehicles up to 2.5 tonnes travelling up to 30mph. The tested solution is pedestrian permeable, with vehicle access points and requires no anchorage in any form and can be quickly deployed across all surfaces without relying on kerbs or structural aids.

The RhinoGuard® range has been designed to fulfil your aesthetic and security needs.

Our RhinoGuard® range of bollards are available with a wide selection of sleeve options, fixing types and foundation depths available to suit your scheme.

All our cores have been tested from 1.5 tonnes to 7.5 tonnes at various speeds up to 50mph.

# RhinoGuard® Bespoke Sleeves

Utilising the experience and knowledge of our team of design engineers, we can develop bespoke sleeve styles in a range of materials and colour options to meet the requirements of any project.

Our design experience and production expertise are your guarantee of success. We strive to offer a unique service that supports you from your first concept sketches right through to installation of the finished product.

Please get in touch if you would like more information.

We promise to

bring your vision to life through our bespoke product solutions service.

As the Super Shallow 100<sup>®</sup> requires little excavation, the bollard series makes the perfect solution to use in areas with high utilities or services. Additionally, the level of waste during install is minimal.

The slim profile of the bollard core means a varied choice of sleeve designs and material options are also offered with the Super Shallow 100®. With a breadth of aesthetic choices available, the bollards can either blend in with the surrounding environment or can create a unique design feature in any space. The tapered design of the core also means that bespoke designs can be achieved to compliment schemes, events or branding.

# **RhinoGuard®** Redi-Rock™

The Redi-Rock™ HVM wall is proven to stop a 7.5 tonne truck at 30mph and is an effective, removable solution that requires minimal maintenance

Interconnected with steel cables and with no ground anchors required, the fastto-install freestanding blocks can be deployed, picked up and moved with no ground work required making this solution ideal for use in crowded places, transport hubs, utility and critical infrastructure as well as buildings of high importance.

Due to its natural stone appearance Redi-Rock™ blends into the background and is aesthetically pleasing, protecting its surrounding without looking out of place.

\*\*Various ratings available with a 7.5 tonne vehicle at 50mph being the strongest specification

The Redi-Rock™ system is also available as a standard walling system for the retention of earth, landscaping and flood protection applications. For more information on this system please contact a member of the team.

# RhinoGuard<sup>®</sup> Titan<sup>®</sup> Kerb

Your Legit On The Longly Road

The RhinoGuard® Titan® Kerb is a high containment solution designed to keep vehicles on their intended path, and to prevent the overrun of vulnerable areas adjacent to the carriageway via a physical and visual barrier.

The 400mm high Titan® Kerb not only offers clear visual delineation between trafficked and non-trafficked areas, it also ensures that any errant traffic is safely redirected back onto its intended path. The product is an essential tool for designers, acting as a passive system that protects vulnerable installations like pedestrian refuges.

# **Aesthetically pleasing Landscape Protection** is the way forward

Installing protective measures to defend public spaces against vehicleborne terror attacks or accidental collisions has traditionally been viewed as a necessary evil in areas such as city centres, stations and sporting venues. This has led to a tendency to give minimal consideration to how these measures fit with the aesthetics of the surrounding environment. Too often, the result is ugly, obtrusive installations that remind people of the threat that exists, potentially putting them off from visiting and enjoying public spaces.

We design and build protective street furniture that blends in seamlessly with the landscape. Our approach enables architects. planners and designers to secure spaces without instilling fear.

Design-led protection is the way forward, keeping people safe... not scared®.

Our RhinoGuard® products are all Secured by Design which means they have all been subject to rigorous testing and have been fully certificated by an independent, third-party certification body.

Secured by Design have many partner organisations, ranging from the Home Office, local authorities, housing associations, developers and manufacturers. Working closely with standards and certification bodies, Secured by Design ensures that publicly available standards actually meet the needs of the police and public alike.

# Design & Engineering capability

Our specialist design and engineering teams are experienced in a range of materials from natural stone and concrete to mild steel, stainless steel and timber.

Only by consistently pushing boundaries and challenging convention can we create public spaces that stand out.

With every element sourced, tailored or created around your project vision, our theoretical and practical understanding of urban space is unrivalled. Our exceptional bespoke products often start with a flash of inspiration that needs to be fully explored and carefully nurtured throughout the project.

We love to stretch our creativity beyond the typical. Inspired by your vision, ambition and aspiration, our open-minded approach means: 'We will where others won't.'

## 01 Project Manager allocated

A specialist Project Manager is allocated to the client giving a single point of contact from initial project scoping through to installation and handover.

## **02** Provisional programme

Working alongside the client, the dedicated Project Manager will detail a provisional programme of works considering site conditions, site programme, contractual implications and health and safety.

## 03 Site survey

If a site survey is required, it will be conducted by a fully qualified member of the Marshalls team. The client will be provided with layout drawings for approval.

## 04 Design

Following layout approval, product specification drawings will be issued and prototype products can be provided within this stage for certain bespoke projects.

## **05** Final review

Product design and project time-frames are confirmed in preparation for commencement of works.

#### 06 Installation

Installation conducted by a specialist in the Marshalls Landscape Protection install team working in collaboration with the Project Manager.

## **07** Project handover and O&M

Project Manager to lead a site inspection and final evaluation with the client.

# ıarshalls.co.uk/landscapeprotection

# HVM security accreditations explained

At the heart of Hostile Vehicle Mitigation are the BSI Publicly Available Specifications (PAS) and International Workshop Agreements (IWA). These have changed how security products are crash tested, designed and procured in order to protect people and places from hostile vehicle attacks, criminal activity and accidental damage.

All accreditations, overseen by the British Standards Institution (BSI), are designed for impact testing and rating Hostile Vehicle Mitigation (HVM) measures, such as bollards, blockers, planters, seating and barriers used for security and counter-terrorism purposes.

Measures crash-tested to the strongest specification under PAS 68 and IWA 14.1 can stop a 30 tonne vehicle travelling at 50mph. They can be built to withstand different levels of energy from an impact depending on the risk assessment, commonly referred to as a Vehicle Dynamic Assessment (VDA).

#### PAS 68

Developed in 2005, the Publicly Available Specification, PAS 68 became the first UK impact test specification and has undergone several reviews since, the most recent taking place in 2013. PAS 68, specifies a performance classification for vehicle security barriers and their foundations when subjected to a horizontal impact.

The standard was devised and administered by the Centre for the Protection of National Infrastructure (CPNI), and tests security barriers at varying speeds, using different sized vehicles. Whilst it is only through specifying products successfully tested in accordance with PAS 68 that protective security can truly be assured, this does not necessarily mean that the highest specifications of PAS 68 protection are always required.

#### **PAS 69**

BSI PAS 68 is complemented by the PAS 69 document, which provides guidance on the selection, installation, foundations and use of PAS 68 tested security products, taking into account site specific conditions, to ensure they are placed as effectively as possible.

PAS 69 suggests a maximum gap of 1.2m between the installed, upright faces of successive security products, to ensure that vehicles are prevented from encroaching freely between the barriers.

#### PAS 170

PAS 170 delivers a testing standard for vehicles of up to 2.5 tonnes travelling at 10 or 20mph. Unlike previous anti-ram solutions, new products tested and certified by PAS 170 provide businesses and local authorities with assurance and proof of performance for the first time.

#### **IWA 14.1**

IWA 14.1 is the global standard which has been developed directly from PAS 68 and has become the preferred accreditation of the two.

No matter where you are based or where you want to create a safe and beautiful space, the IWA workshop agreement standardises all counter terrorism impact testing agreements and models and combines them into one, making the testing and specification of products easier and clearer for all specifiers.

#### **IWA 14.2**

IWA 14.2 provides guidance for the selection, installation and use of vehicle security barriers (VSBs) and describes the process of producing operational requirements (ORs). IWA 14.2 also gives guidance on a design method for assessing the performance of a VSB.

#### C-VAW

C-VAW testing is a government approved approach to proving a product's resistance from a ramming vehicle attack. Various vehicles are used to see how the system will perform from other attacks including angular and driving at gaps between the products.

80 (50)	370/271	617/568	864	1778	1852/1680	7407/7283	K12*
96 (60)	533/424	889/887	1244				
112 (70)	726	1210					

(International /USA) \* old USA K rating tests which use a 6800 (M) vehicle. The table above provides the kinetic energy values (in kj) created on impact, for each of the vehicle types and speeds used in IWA, PAS and ASTM impact testing. All test standards use a similar array of vehicles and speeds for testing and therefore deliver similar energy in terms of kilojoules (kj).

# Security ratings explained

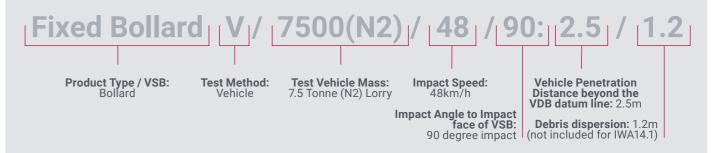

The International (IWA14.1), UK (PAS 68) and USA (ASTM2656) test standards are defined with a specific rating which includes the vehicle type, test mass and vehicle speed, together with the penetration distance.

#### PAS 68 & IWA 14.1

The PAS 68 and IWA14.1 classification is set out with a row of letters, symbols and numbers that indicate the specification that the product has been tested to. The key difference between the IWA14.1 rating and the PAS 68 is that with IWA14.1 the debris dispersion is not included.

PAS 68 performance rating example: Fixed Bollard V/7500(N2)/48/90:2.5/1.2

IWA14.1 performance rating comparison example: Fixed Bollard V/7500(N2)/48/90:2.5

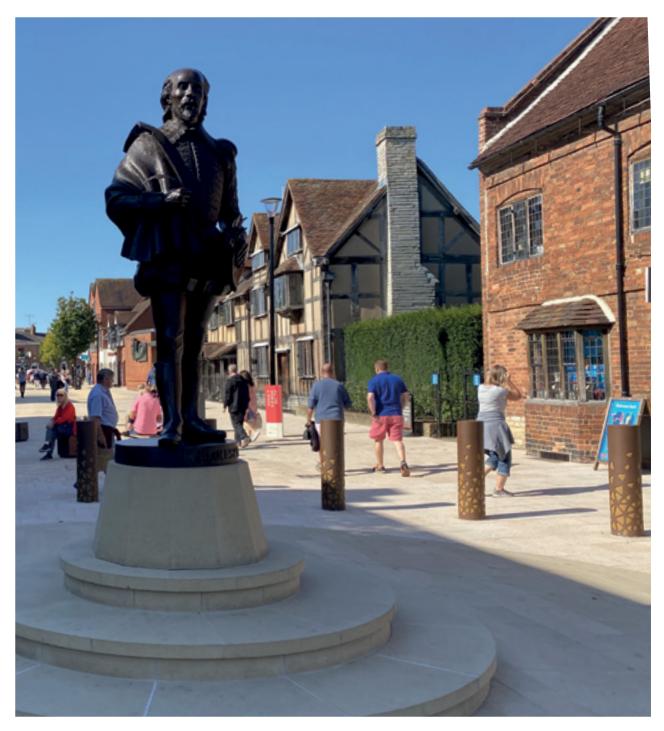

#### **ASTM 2656**

ASTM 2656 is the USA testing standard which has grown from the original K ratings standard.

**ASTM 2656 performance rating example:** M 50 P1
